

Printed card designs

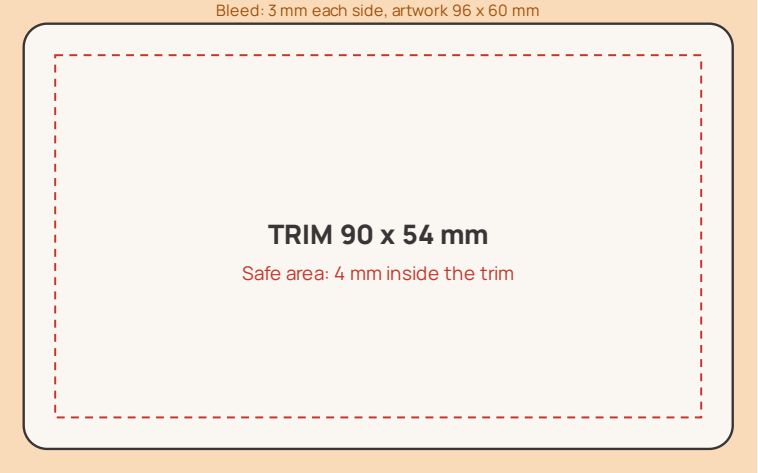

Front and back, by audience

Five card families for students, small businesses, medium businesses, owners and large-business employees, with print rules.

Version 1.0 draft, 9 October 2026. Companion to PRD v1.1 and the UI/UX Specification.

1. Print system

One system, five card families. The card family is a template property. The seat's role and the company's plan decide which family a card gets by default, and admins can override it.

Size and zones

- Trim 90 x 54 mm, landscape. Corners rounded 3 mm for PVC.
- Bleed 3 mm. Backgrounds run to the 96 x 60 mm edge.
- Keep text and QR at least 4 mm inside the trim.

Minimums

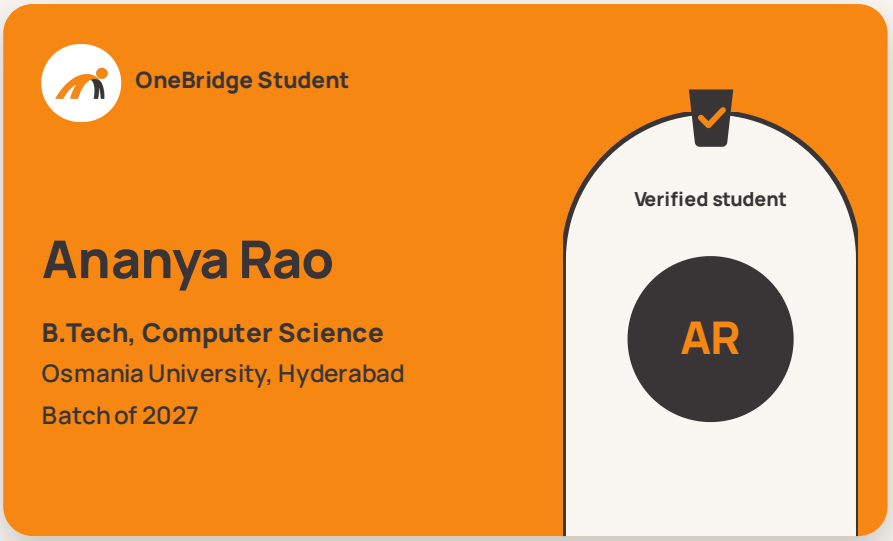

- QR 20 mm or larger, on a light plate with a clear border.
- Text 6 pt or larger. Lines 0.25 pt or thicker.
- Dark text on orange, never white (contrast rule).

Which family a seat gets

Family	Default for	Plan
Student	Verified student profile	Student
Small business	Any seat in a small company	Starter
Medium employee	Employee seats	Business
Owner and leadership	Seats with the Company Owner role, or marked leadership by an admin	Business and Enterprise
Large employee	Employee seats with verify QR and employee ID	Enterprise

2. Student card

Front

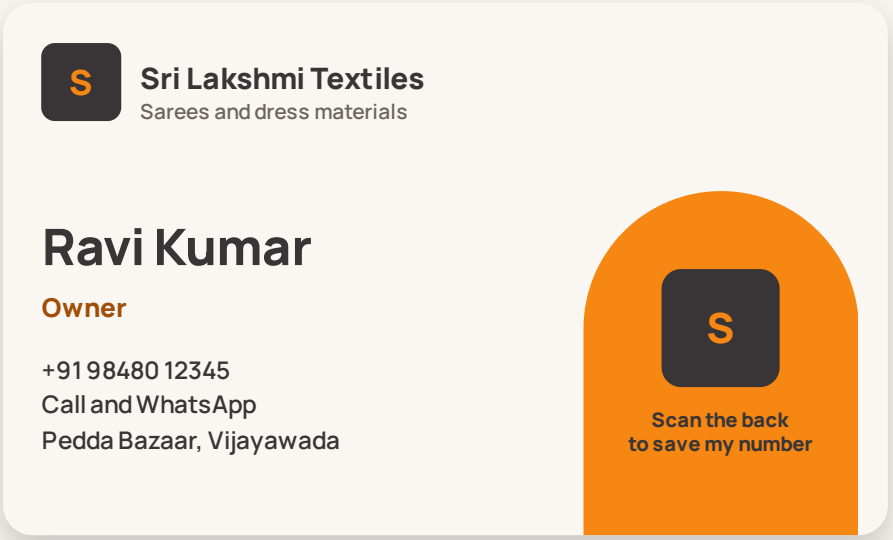

Back

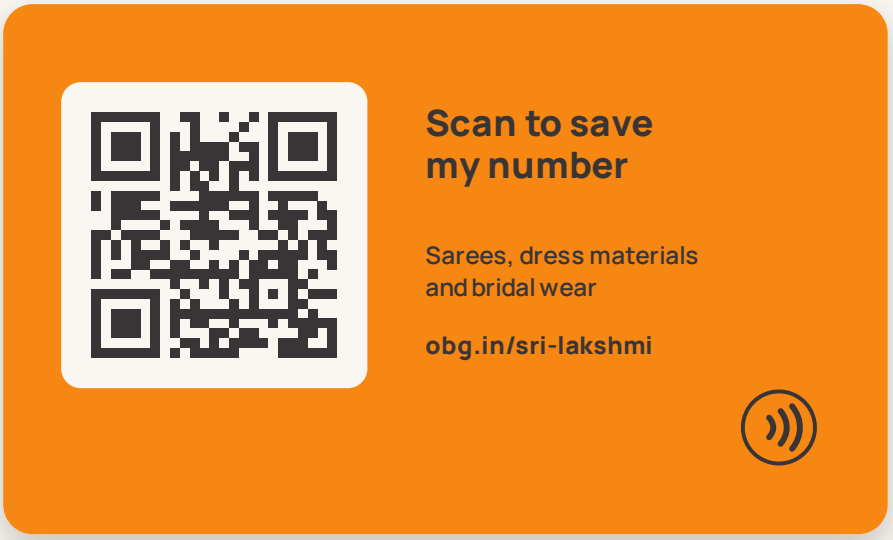

Who it is for	Verified students (free plan). Person-owned profile, no company.
Design tone	Bold and expressive. OneBridge orange leads, because there is no company brand to follow.
Front and back content	Name, course, college, batch year, verified-student mark, portfolio link, skills line
Material and finish	Matte PVC with NFC. Single-sided artwork can also be printed on paper for low cost.
Who edits what	The student edits all fields. Course and college come from verification and are locked after approval.
Design rule	QR sits on a paper plate for contrast. The back says what scanning does.

3. Small business card

Front

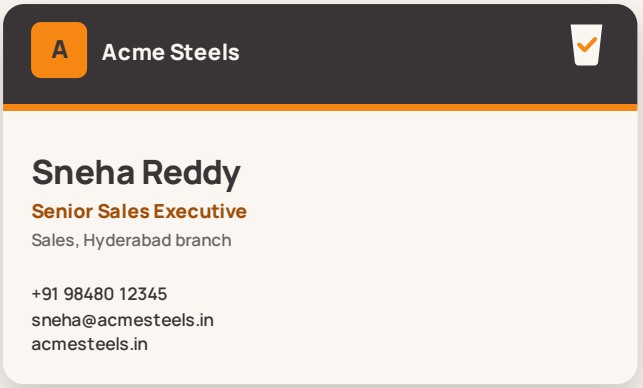

Back

Who it is for	Micro and small businesses (Starter plan). Owner and staff share one layout.
Design tone	Friendly and simple. One big action: scan to save my number.
Front and back content	Business name, one-line description, name, role, phone (call and WhatsApp), area, QR
Material and finish	Matte or gloss PVC with NFC. Wood or bamboo for a craft-shop feel.
Who edits what	Owner sets the logo and colours. Staff edit name, role and phone only.
Design rule	Phone number is the hero, so the QR is large (25 mm) on the back.

4. Medium business: employee card

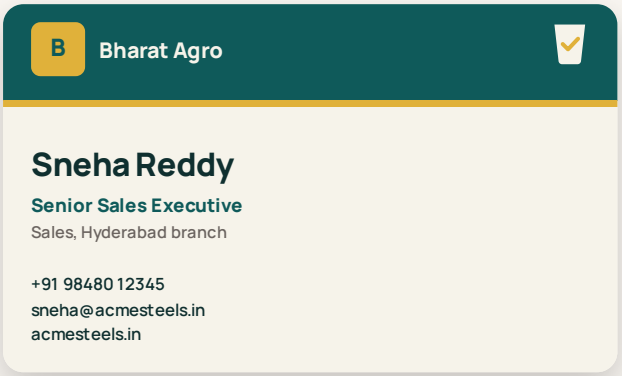

Front

Back

Who it is for	Growing companies (Business plan). Every employee seat.
Design tone	Calm and professional. A structured layout that the brand kit recolours.
Front and back content	Logo, company, name, designation, department, branch, phone, email, website, company address, Business ID, QR
Material and finish	Matte PVC with NFC. Paper stock for events.
Who edits what	Brand kit locks logo, colours and layout. Employees edit name, photo and contact fields where unlocked.
Design rule	Brand kit slots: band colour, accent colour, logo, text colour. The keystone stays constant.

Same layout with a customer brand kit. Band, accent, text colour and logo change. The structure does not, so cards from every company stay consistent and printable.

5. Owner and leadership card

Front

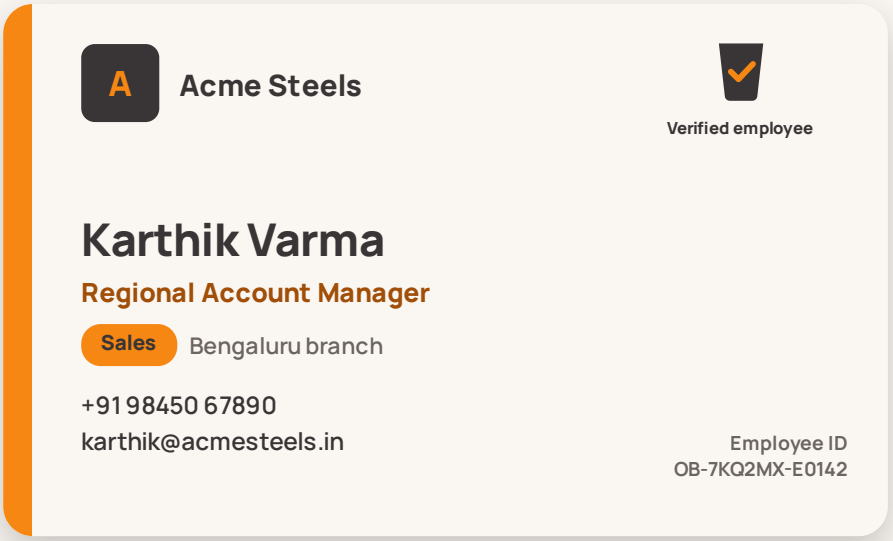

Back

Who it is for	Company Owner and directors, as the default card class for those roles.
Design tone	Premium and quiet. Dark front, one orange bridge line, minimal text.
Front and back content	Logo, name, title, direct phone, email, short brand line, QR
Material and finish	Soft-touch PVC with spot UV on the arc, or wood or metal with engraving. Needs a one-colour version for engraving.
Who edits what	Owner or admin edits. Fewer fields than the employee card on purpose.
Design rule	Metal blocks NFC signals, so metal cards need a vendor-approved NFC design. Confirm on a physical sample.

6. Large business: employee card

Front

Back

Who it is for	Enterprise plan. Large, multi-branch workforces and field forces.
Design tone	Structured and checkable. Department chip, employee ID and a verify action.
Front and back content	Logo, name, designation, department chip, branch, phone, email, employee ID, verified-employee mark, QR to verify
Material and finish	Matte PVC with NFC, standard issue to all staff. Lost-card return line on the back.
Who edits what	Admin locks everything except phone. Department colour comes from the org structure.
Design rule	The back QR opens a verification page that confirms the person is a current employee.

7. Print production

- **Source colour is sRGB.** Printers convert to CMYK. Approve a physical proof and ask the vendor for the nearest spot colour for Bridge Orange. Do not rely on the screen.
- **NFC chip sits behind the back.** The NFC ring graphic marks the tap area. Keep metallic foil and ink off that area.
- **Wood and metal need a one-colour version** of each design for engraving. Metal needs a vendor-approved NFC design.
- **Every card is generated from seat data.** The server produces a print PDF with bleed for each order, and the admin approves a proof before payment (PRD P1-NFC-01).
- **The short link and QR never change.** A reprint after a role change keeps the same QR.
