PRODUCT REQUIREMENTS DOCUMENT

OneBridge Grid

The Digital Business Identity & Relationship Infrastructure

Beyond Business Cards. Building the Digital Infrastructure for Business Growth.

Scope: All phases: Identity & Cards · Directory & Networking · AI Intelligence · OneBridge Career
Market: India-first (INR) · Web + PWA in Phase 1, native apps in Phase 2
Version: v1.0 Draft for review · 3 October 2026

1. Executive Summary

OneBridge Grid is a **Digital Business Identity & Relationship Infrastructure** for modern businesses. It lets an organisation build its digital presence, manage its workforce identity, connect with other businesses, and grow through one intelligent business network.

> **The core idea**
>
> The digital business card is **not the product. It is the gateway** into the OneBridge ecosystem.
>
> A company buys a subscription for cards, QR and NFC, but what it actually gets is a **permanent, company-owned digital identity**, an organised workforce, a trackable relationship graph, and (later) AI-driven growth intelligence.

The platform is delivered in four sequential phases. Each phase uses the data and network effects created by the one before it:

Phase	Theme	What ships	Why it matters
1	Identity & Cards	OneBridge Business ID, company/branch/department/employee management, digital business cards, dynamic QR, NFC cards, public business profile, basic analytics, subscriptions & billing	Creates the identity layer and the first revenue, and puts thousands of physical touchpoints into the market
2	Directory & Networking	Connections, messaging, business directory, communities, CRM & lead pipeline, reviews, events, advanced analytics, native mobile apps, integrations	Turns one-off card scans into a persistent relationship graph, which drives retention and network effects
3	AI Intelligence & Marketplace	AI assistant, lead intelligence, partner/supplier/customer recommendations, marketplace & vendor discovery, referral network, business automation, public API	Monetises the graph through intelligence, commissions and AI credits
4	OneBridge Career	Student & professional profiles, verified employment, hiring, mentorship, career network	Extends the ecosystem to individuals. This is an expansion, not part of the initial business product

Primary market: India-first (SMBs, mid-market and enterprises with field, sales or branch-heavy workforces), priced in INR. **Long-term ambition:** become India's Business Identity Infrastructure, where every company, every employee and every business relationship is connected through OneBridge.

North Star Metric: Monthly Active Business Relationships (MABR). These are relationships (connection, saved contact, lead or conversation) between a OneBridge identity and another party that had at least one tracked interaction in the last 30 days. It measures the thing the platform actually sells: relationships, not cards.

2. Document Control & Sources

Field	Value
Product	OneBridge Grid
Tagline	The Digital Business Identity & Relationship Infrastructure
Document	Product Requirements Document (PRD), all phases
Version / Status	v1.0 / Draft for review
Date	3 October 2026
Author	Product (prepared with Claude)
Reviewers	Founders / Management, Engineering Lead, Design Lead, Sales/GTM Lead

Source material

Source	Used for
Digital_Identity_Platform_Architecture.png (infographic)	Vision & paradigm shift, value chain, org hierarchy, One ID, 7-layer architecture, 4-phase roadmap, network intelligence
Gemini Notebook “OneBridge Grid: Business Ecosystem Architecture”, source 1: “OneBridge Grid - Business Ecosystem Architecture”	Platform layers, customer journey, organisation & identity architecture, business-card flow, revenue chain, future expansion, high-level technical architecture, value proposition
Same notebook, source 2: “# ROLE” (19-slide presentation brief)	Problem statement, mission, core modules, card experience, AI capabilities, detailed phase roadmap, revenue streams, tech stack, competitive positioning, long-term vision
Same notebook, “Business Mindmap”	Generated from the two sources above (did not render; content assumed equivalent)
OneBridge_Grid_Ecosystem.pptx	Not usable: the file is truncated (no slide content). See Open Questions.

Items marked **[Assumption]** are product proposals made in this PRD that are not in the source material. They must be validated before build.

3. Problem Statement

Indian businesses, from 10-person distributors to 5,000-person enterprises, still run their professional identity and first-touch networking on paper and personal phones. The result:

Problem	What happens today	Business impact
Traditional paper business cards	Printed in bulk, outdated on every role/number change, thrown away after events	Recurring print cost; stale data; no sustainability story
Lost contacts	Cards end up in drawers; contacts saved on personal phones with no context	Leads are lost and follow-ups missed
No employee identity management	Each employee self-represents with inconsistent titles, designs and numbers	Brand inconsistency; ex-employees keep representing the company
No company digital presence	Small businesses lack a credible, verified, mobile-first profile	Low trust with new buyers, partners and suppliers
No networking intelligence	No view of who met whom, from which branch, at which event	Management can’t see or steer relationship-building
No analytics	Zero data on card views, saves or conversions	Field/sales ROI can’t be measured
No relationship tracking	When an employee leaves, their relationships leave with them	Institutional relationship capital is lost
No smart business connections	Partner/supplier discovery happens through word of mouth	Slow, biased and expensive business development

> **Root cause**
>
> Business identity today belongs to **individuals and paper**, not to the **organisation**, and relationships are never captured as data. OneBridge Grid fixes the ownership model first (company-owned identity), then captures the relationships, then adds intelligence on top.

4. Vision, Mission & Positioning

4.1 Vision

OneBridge Grid is **not a Digital Business Card Platform**. It is a **Digital Business Identity Platform**: a network of trusted business relationships (the "Grid").

4.2 Mission

> **Every Business · Every Employee · Every Connection**
>
> **One Digital Identity. One Intelligent Network.**

4.3 Positioning statement

For organisations that depend on people meeting people (sales, distribution, services, real estate, manufacturing, healthcare, education and professional services), **OneBridge Grid** is the digital business identity and relationship infrastructure that gives every company a permanent, verified identity, equips every employee with a smart credential (digital card, QR, NFC), and turns every interaction into a measurable, company-owned relationship. Unlike paper cards, personal social networks or standalone CRMs, OneBridge is **organisation-first**: the identity and the relationship graph belong to the company and get more valuable over time.

4.4 Product philosophy (the value chain)

Value moves from identity to network intelligence. Each step depends on the one before it:

Physical Business → Digital Identity → Organization → Employees → Digital Business Cards → QR + NFC → Business Connections → Business Network → Business Intelligence → Business Growth

The infographic shortens this to five stages: **Physical Touchpoints → Digital Identity → Business Network → AI Intelligence → Enterprise Growth.**

4.5 Design principles

- **Organisation-first.** The company owns the identity, the cards and the relationships captured through them. Employees are custodians.
- **Gateway, not product.** Every card interaction should push the relationship one step deeper (view → save → message → connect → opportunity).
- **Zero-friction for visitors.** Recipients never need an app or an account to view a card or save a contact.
- **Premium by default.** Apple/Stripe-grade visual quality on every card and profile, because the card is the company's brand in someone else's hand.
- **Data compounds.** Every feature should add to the relationship graph that powers Phase 2–4.
- **India-first, global-ready.** INR pricing, GST, UPI, WhatsApp-native sharing, regional languages, built on a multi-region-capable architecture.

4.6 Long-term vision

OneBridge becomes **India's Business Identity Infrastructure**, where every company, every employee and every business relationship is connected through OneBridge. Closing line: **"Beyond Business Cards. Building the Digital Infrastructure for Business Growth."**

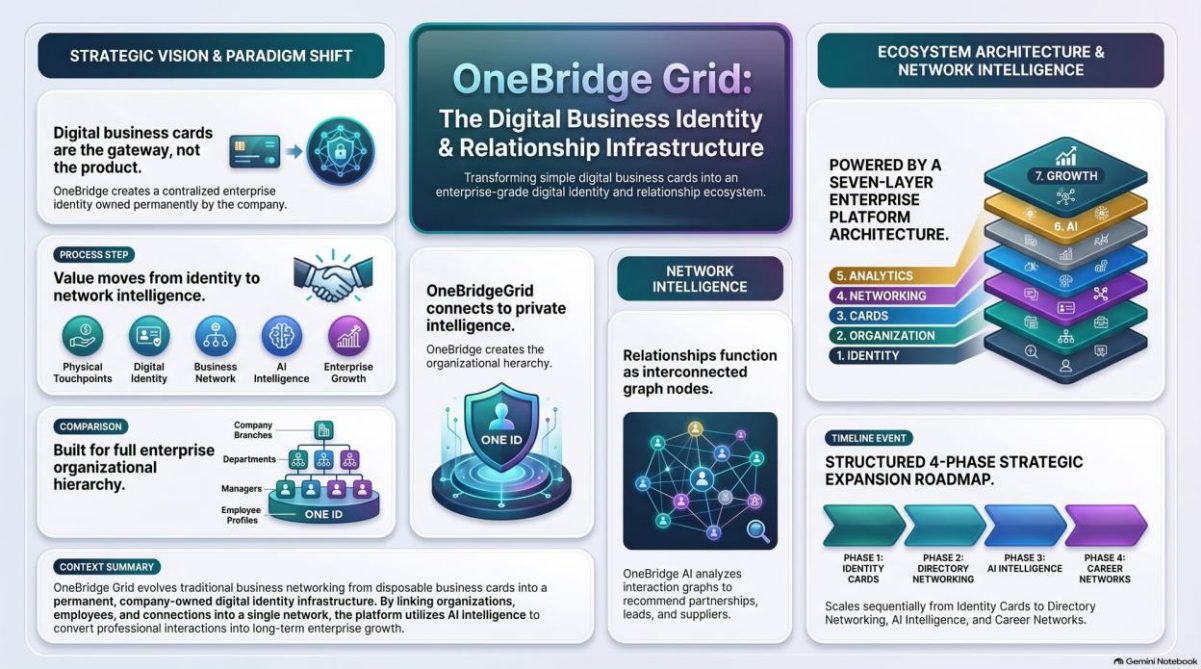

Figure 1. OneBridge Grid ecosystem overview (source infographic)

5. Goals, Non-Goals & Success Metrics

5.1 Business goals

#	Goal	Target [Assumption]
G1	Establish OneBridge Business ID as the trusted identity for Indian businesses	1,000 paying organisations within 12 months of Phase 1 GA
G2	Build a recurring revenue base from subscriptions + NFC hardware	₹1.5 Cr ARR by end of Phase 2; NFC attach rate ≥ 40% of paying orgs
G3	Create a live business relationship graph	≥ 500,000 captured relationships by end of Phase 2
G4	Monetise intelligence and marketplace	≥ 15% of revenue from AI credits, add-ons and commission by end of Phase 3
G5	Launch the career network on top of verified employment data	100,000 verified professional profiles within 12 months of Phase 4 launch

5.2 Product success metrics

Metric	Definition	Phase	Target [Assumption]
MABR (North Star)	Relationships with ≥ 1 tracked interaction in trailing 30 days	All	Grow ≥ 10% MoM after Phase 2 GA
Time-to-first-card	Signup → first employee card published	1	< 10 minutes (median)
Org activation	% of new orgs with ≥ 3 employee cards shared within 14 days	1	≥ 60%
Card view → save rate	Contact saves / unique card views	1	≥ 25%
Seat utilisation	Active cards / purchased seats	1	≥ 80%
Logo retention (annual)	Paying orgs retained after 12 months	1–2	≥ 85% (SMB), ≥ 95% (Enterprise)
Lead capture rate	Leads created / card views	2	≥ 8%
Connection acceptance	Accepted / sent connection requests	2	≥ 55%
Recommendation acceptance	AI recommendations acted on / shown	3	≥ 12%
Marketplace GMV	Value of transactions initiated via marketplace	3	Track; target set at Phase 3 kickoff
Career profile verification	% career profiles with org-verified employment	4	≥ 50%
NPS (admins)	Net Promoter Score of company admins	All	≥ 45

5.3 Non-goals

- Becoming a general-purpose social network or content feed (OneBridge is a B2B relationship network, not LinkedIn-style social media).

- Replacing full enterprise CRMs (Salesforce, Zoho, HubSpot) for large sales teams. OneBridge CRM is relationship-centric and integrates/exports to them.
- Building an HRMS/payroll. Employee records exist for identity purposes only; HRMS integration is via sync.
- Consumer (B2C) personal cards for non-business users in Phases 1–3. Individuals enter the ecosystem through an organisation (or via OneBridge Career in Phase 4).
- Manufacturing NFC hardware in-house. Cards are sourced from vetted vendors and encoded by OneBridge.

6. Target Market & Personas

6.1 Market segments (India-first)

Segment	Profile	Primary need	Entry plan
Micro & small businesses	1–20 employees; shops, consultants, agencies, clinics, real estate brokers	Credible digital presence, WhatsApp-friendly card, product showcase	Free → Starter
SMB / growing companies	20–200 employees; distributors, manufacturers, IT services, education	Consistent branding across staff, lead capture, basic analytics	Business
Mid-market & enterprise	200–10,000+ employees, multi-branch; BFSI, pharma, FMCG field forces, real estate developers	Central control, SSO, offboarding, compliance, CRM/HRMS integration, relationship visibility	Enterprise
Event & community organisers	Trade bodies, chambers of commerce, expos	Attendee networking, lead exchange	Phase 2 Events add-on
Students & professionals	Individuals	Verified career identity, jobs, mentorship	Phase 4 (OneBridge Career)

6.2 Personas

Persona	Goals	Pain points	Key features
Business Owner (Rajesh, 45, owns a 60-person industrial distributor)	Look established; grow dealer network; know what sales staff are doing	Inconsistent cards; leads lost when salespeople leave	Company identity, branding, analytics, relationship ownership, CRM
Company Admin / HR Admin (Priya, 31)	Onboard/offboard staff in minutes; keep data accurate	Manual card printing cycles; chasing approvals	Bulk import, templates, RBAC, NFC ordering, deactivate & reassign
Branch / Department Manager (Arjun, 38)	See team performance; ensure follow-ups	No visibility of team networking	Team dashboards, lead assignment, leaderboards
Employee / Sales Executive (Sneha, 26)	Share details instantly; capture leads; look professional	Running out of cards; typing contacts manually	Digital card, QR/NFC, wallet pass, lead capture, follow-up reminders
Visitor / Prospect (anyone who receives a card)	Save contact and learn about the business quickly	Having to install apps or sign up	App-less card page, Save Contact (vCard), WhatsApp, share-back form
Partner / Supplier / Dealer	Find and be found by relevant businesses	Discovery via word of mouth	Directory, verified profiles, recommendations, marketplace
OneBridge Platform Ops (internal)	Verify businesses, fulfil NFC orders, support customers	Fraud, failed payments, hardware logistics	Super-admin console, KYB queue, order management, audit logs
Student / Professional / Recruiter / Mentor (Phase 4)	Build a verified career identity; hire; mentor	Unverified résumés; noisy job boards	Career profile, verified employment, jobs, mentorship

7. Competitive Positioning

Source comparison set: Traditional Business Card, LinkedIn, “GRID AI”, CRM, and OneBridge Grid. (“GRID AI” is not defined in the sources. It is treated here as the category of **AI-first digital card / networking apps**; see Open Questions.)

Capability	Paper card	LinkedIn	Digital-card / AI card apps	CRM	OneBridge Grid
Organisation management (branches, depts, roles)	—	—	Partial	Partial	✓ Core
Employee cards centrally managed	—	—	✓	—	✓
Company-owned identity (survives employee exit)	—	—	Partial	✓ (data only)	✓ Core
Business network / directory	—	✓ (people)	—	—	✓ (companies + people)
Analytics on engagement	—	Limited	✓	✓	✓
AI recommendations (partners, suppliers, leads)	—	Partial	Partial	Partial	✓ (graph-based)
NFC + QR physical touchpoints	—	QR only	✓	—	✓
Relationship intelligence (who knows whom)	—	Personal only	—	Partial	✓ Core
No app needed for recipient	✓	—	✓	n/a	✓

7.1 Why OneBridge wins

- **One Digital Identity**: a single, permanent OneBridge Business ID per organisation, cascading to every branch, department and employee.
- **Organisation-first, employee-first, business-first**: balanced value for the buyer (company), the user (employee) and the counterparty (visitor).
- **Scalable & Enterprise-ready**: RBAC, SSO, audit logs, bulk operations, data residency in India.
- **AI-ready**: the relationship graph is designed from day one to feed recommendations.
- **Future platforms built in**: Marketplace, Career Platform and Business Network grow from the same identity graph, creating a moat that gets deeper over time.

8. Ecosystem & Platform Architecture

8.1 Seven-layer enterprise platform

The platform is built as seven layers. Each layer consumes the one below it:

#	Layer	Responsibility	Key capabilities	Phase
7	Growth	Convert relationships into revenue	Marketplace, referral network, vendor discovery, career network, growth tracking	3–4
6	AI	Intelligence over the graph	AI assistant, partner/supplier/customer recommendations, lead scoring, employee recommendations	3
5	Analytics	Measure engagement & outcomes	Card views, saves, taps, scans, leads, conversion funnels, team dashboards, business insights	1–3
4	Networking	Relationships between identities	Connections, messaging, directory, communities, events, CRM, reviews	2
3	Cards (Digital)	Physical/digital touchpoints	Digital business cards, NFC cards, QR cards, business/company profile, products, portfolio, services, gallery	1
2	Organization	Structure & governance	Company, branches, departments, teams, managers, employees, roles & permissions	1
1	Identity	Permanent, verified identity	Company identity, branch identity, department identity, employee identity; OneBridge Business ID; verification	1

8.2 Identity architecture

> **Identity ownership rule (non-negotiable)**
>
> Every organisation receives **one permanent identity: the OneBridge Business ID**. All branch, department and employee identities hang off it.
>
> **The identity belongs to the company, not the employee.** When an employee leaves, their card, QR, NFC and captured relationships stay with the company and can be reassigned.

Company → OneBridge Business ID → Branches → Departments → Employees → Digital Business Identity → QR → NFC → Public Business Profile

Identity	Format [Assumption]	Example	Lifecycle
OneBridge Business ID (company)	OB-<6 char base32>	OB-7KQ2MX	Permanent; never reused; survives plan changes (downgrades to read-only public profile, never deleted silently)
Branch ID	<BusinessID>-B<nn>	OB-7KQ2MX-B03	Created/archived by admins
Department ID	<BusinessID>-D<nn>	OB-7KQ2MX-D07	Created/archived by admins
Employee Identity (seat)	<BusinessID>-E<nnnn>	OB-7KQ2MX-E0142	Seat persists; person assigned to seat can change
Public URL	grid.onebridge.in/<company-slug>/<person-slug>	/acme-steels/sneha-r	Slug change keeps 301 redirect forever

Identity	Format [Assumption]	Example	Lifecycle
Short link (QR/NFC target)	obg.in/<8 char>	obg.in/x8Fk2LpQ	Immutable; destination re-pointable by admin

Seat vs. person: an **Employee Identity** is a company-owned **seat** (title, branch, department, card, QR, NFC, relationships). A **Person** (user account with login) is assigned to the seat. Offboarding unassigns the person; the seat can be reassigned to a successor, with configurable redirect/handover messaging for visitors.

8.3 Organisation architecture

Company → Company Admin → Branches (Branch Manager) → Departments (Sales · Marketing · HR · Support · Development) → Teams → Employees

Each employee has a **Digital Card, NFC Card, QR Code, Analytics and a Public Profile**. Hierarchy depth is configurable: Company → Branch → Department → Team → Employee, with Managers attachable at any node. Small companies may use Company → Employees only.

8.4 Business network (the “Grid”)

Every **company becomes a node**, every **employee becomes a node**, and every **relationship becomes an edge**. Each company’s customers, partners and suppliers are linked by business relationships. Together these form OneBridge Grid, a network of trusted business relationships.

Node type	Edge types (relationship layer)
Company, Branch, Employee (seat), Person, External contact, Community, Event	Customer, Partner, Supplier, Dealer, Vendor, Employee-of, Investor, Community member, Event attendee, Met-via (card interaction), Referred-by

OneBridge AI analyses these interaction graphs to recommend partnerships, leads and suppliers (Phase 3).

9. Customer Journeys & Core Flows

9.1 Business customer journey

Business Owner → Registers Company → Chooses Subscription → Creates Company Profile → Sets up Organization (branches, departments) → Invites/Adds Employees → Generates Employee Business Cards → Orders/Issues NFC Cards → Employees Start Sharing → Visitors Scan QR / Tap NFC → Business Connections Grow → Analytics Increase → Leads Increase → Business Expands

9.2 Business card interaction flow

Company → Employee → Digital Business Card → QR / NFC → Visitor → View Profile → Save Contact → Message → Connect → Business Opportunity → Long-term Relationship

> **Design implication**
>
> The card starts the interaction, but **the relationship is the long-term value**. Every card screen must offer a clear next step (Save → WhatsApp/Message → Share-back details → Connect), and every step must be recorded as a relationship event.

9.3 Key flow specifications

F1. Company onboarding (target < 10 min to first card)

- Sign up with mobile OTP or Google/Microsoft → enter company name, industry, size, city, GSTIN (optional at signup, required for verification badge).
- Choose plan (Free / Starter / Business; Enterprise = contact sales) → pay via Razorpay (UPI, cards, netbanking) or start 14-day trial [Assumption].
- Brand setup: logo, colours, cover image; system generates a card template preview live.
- Add first employee (self) → card published → prompt to share via WhatsApp and to invite colleagues (CSV/Excel import, invite link, or HRMS sync on Enterprise).

F2. Visitor experience (no app, no login)

- Scan QR / tap NFC / open link → card page loads in < 1.5 s on 4G (LCP).
- Primary actions: **Save Contact** (vCard download, including photo & company), **Call**, **WhatsApp**, **Email**, **Share-back** ("Share my details" form creates a lead and a relationship).
- Secondary: company profile, products/services, portfolio, gallery, social links, reviews, location map, verification badge.
- Consent banner only when non-essential tracking is enabled; anonymous analytics by default (DPDP-aligned).

F3. Employee offboarding & seat reassignment

- Admin marks employee as leaving → chooses: (a) deactivate card with "no longer with company, contact X" page, (b) redirect to successor's card, or (c) redirect to department/company page.
- Person's login access to company data is revoked immediately; relationships/leads transfer to the successor or manager.
- Physical NFC card destination is re-pointed (short link) and does **not** need re-encoding; admin can optionally reissue hardware.
- Employee keeps a personal export of their own public card info only (no company leads), configurable by admin [Assumption].

F4. NFC card order & activation

- Admin selects employees → card material (PVC / Wood / Metal) & design (company template) → shipping address (single bulk or per branch) → pays (GST invoice).
- Ops console receives order → vendor print → OneBridge encodes NTAG chips with immutable short links → QC → dispatch with tracking.
- Employee taps the card on their own phone to **activate** (binds chip UID to seat). Unactivated cards show a “card not yet activated” page.
- Lost card: admin/employee marks lost → chip UID disabled; reorder at replacement price.

10. Functional Requirements

Requirements are grouped by phase and module. Priority uses MoSCoW within each phase: **M** = Must (release-blocking), **S** = Should, **C** = Could. IDs are stable and must be referenced in tickets, designs and test cases.

Phase	Modules
Phase 1: Identity & Cards	Identity & Verification · Company & Organisation · Employees & Roles · Digital Business Cards · QR · NFC · Public Business Profile (Products, Portfolio, Services, Gallery) · Basic Analytics · Subscriptions & Billing · Notifications · Platform Admin Console
Phase 2: Directory & Networking	Connections · Messaging · Business Directory · Communities · CRM & Lead Tracking · Reviews · Events · Advanced Analytics · Native Mobile Apps · Integrations
Phase 3: AI Intelligence	AI Assistant · Lead Intelligence · Business Recommendations · Marketplace & Vendor Discovery · Referral Network · Business Automation · AI Credits · Public API & Webhooks
Phase 4: OneBridge Career	Personal Career Identity · Verified Employment · Student Profiles · Hiring · Mentorship · Career Network

11. Phase 1: Business Identity, Cards, QR, NFC & Company Management

Phase objective & exit criteria

Objective: give every customer organisation a permanent OneBridge Business ID, a managed workforce identity, and premium digital + physical cards that start capturing relationships.

- A company can sign up, pay, brand, add 100 employees via import and publish all cards in < 30 minutes.
- NFC order-to-delivery ≤ 7 business days in metro cities [Assumption].
- ≥ 50 paying organisations in closed beta with org activation ≥ 60%.
- All Must requirements pass acceptance; NFRs in Section 16 met (performance, security, DPDP).

11.1 Identity & Verification

As a Business Owner, **I want** my company to get a permanent, verified OneBridge Business ID, **so that** buyers and partners trust my business and employees.

ID	Requirement	Pri.	Acceptance criteria
P1-ID-01	Generate a unique, immutable OneBridge Business ID for every organisation at signup.	M	ID format per Section 8.2; unique across platform; never reused even after deletion; shown in admin settings and on public profile.
P1-ID-02	User accounts via mobile OTP (primary), email+password, Google and Microsoft sign-in.	M	OTP delivered < 30 s (SMS + WhatsApp fallback); rate-limited; MFA optional for admins (TOTP).
P1-ID-03	Know-Your-Business (KYB) verification using GSTIN, with CIN/Udyam/PAN as alternatives.	M	GSTIN validated via GST API/aggregator; legal name match; ops manual review queue for mismatches; status Pending/Verified/Rejected with reason.
P1-ID-04	Verification badge shown on company profile and all employee cards of verified organisations.	M	Badge only when KYB = Verified; tooltip shows “Verified business since <date>”; revoked automatically if verification lapses.
P1-ID-05	Employee identity (seat) separate from person (login) as per Section 8.2.	M	Reassigning a seat preserves card URL, QR, NFC, analytics history and relationships.
P1-ID-06	Domain verification (DNS TXT) to auto-approve employees with company email domain.	S	Admin adds domain → TXT record check → users with that domain can request to join and are auto-matched.
P1-ID-07	Employee identity verification (work email or admin attestation) shown as “Verified employee”.	S	Badge appears only for seats confirmed by admin or verified domain email.
P1-ID-08	Enterprise SSO (SAML 2.0 / OIDC: Azure AD, Google Workspace, Okta).	S	JIT provisioning; SSO-enforced login toggle; SCIM in Phase 2.

11.2 Company & Organisation Management

As a Company Admin, **I want** to model our branches, departments and teams, **so that** cards, permissions and analytics reflect how we actually work.

ID	Requirement	Pri.	Acceptance criteria
P1-ORG-01	Company profile: legal & display name, logo, cover, brand colours, industry, size, about, website, addresses, GSTIN, social links.	M	All fields editable by Company Admin; changes propagate to all cards within 60 s.
P1-ORG-02	Create/edit/archive Branches with address, map pin, contact and Branch Manager.	M	Unlimited branches on Business+; archived branches hidden from public, history retained.
P1-ORG-03	Create/edit/archive Departments (Sales, Marketing, HR, Support, Development + custom), optionally per branch.	M	Departments can be global or branch-scoped; templates offered at setup.
P1-ORG-04	Teams under departments, with Team Lead.	S	Employee can belong to one primary team; manager chain derived for reporting.
P1-ORG-05	Organisation chart view (tree) with drag-and-drop moves.	S	Moving an employee updates card branch/department fields and access scope.
P1-ORG-06	Brand kit: card templates locked/unlocked per field (e.g., employees can edit bio but not logo/colours).	M	Admin sets field-level lock; employee UI greys out locked fields.
P1-ORG-07	Multiple companies per account (group companies / subsidiaries) with org switcher.	C	User with roles in multiple orgs can switch without re-login; data strictly isolated.
P1-ORG-08	Audit log of all admin actions (who, what, when, before/after).	M	Immutable; filterable; exportable CSV; retention per plan (90 days to 2 years).

11.3 Employee Management & Roles

As an HR Admin, **I want** to onboard and offboard employees in bulk, **so that** cards are always accurate and ex-employees never represent us.

ID	Requirement	Pri.	Acceptance criteria
P1-EMP-01	Add employees individually, via CSV/Excel import (with validation preview), or via invite link.	M	Import of 1,000 rows < 60 s; row-level errors shown; duplicate detection by mobile/email.
P1-EMP-02	Employee fields: name, photo, designation, department, branch, team, manager, mobile(s), WhatsApp, email, bio, languages, skills, social links, custom fields.	M	Custom fields (text, link, select) definable per company; visibility per field (public / internal).
P1-EMP-03	Invite flow: SMS/WhatsApp/email invite → employee claims seat → completes profile → card goes live (or awaits approval).	M	Optional admin approval workflow before a card is published.
P1-EMP-04	Role-based access control: Super Admin (platform), Company Owner, Company Admin, Branch Manager, Department Manager, Team Lead, Employee, Viewer/Auditor.	M	Permissions per matrix in Section 15; scopes enforced server-side.
P1-EMP-05	Offboarding: deactivate / redirect / reassign seat as per flow F3.	M	Access revoked ≤ 1 min; visitor sees configured message; relationships transferred; logged in audit.
P1-EMP-06	Bulk actions: change template, move branch/department, deactivate, order NFC, resend invites.	M	Bulk ops on up to 5,000 employees run as background jobs with progress and result report.

ID	Requirement	Pri.	Acceptance criteria
P1-EMP-07	Employee self-service profile editing within locked-field rules; changes optionally require approval.	M	Pending changes visible to approver; employee notified on approval/rejection.
P1-EMP-08	HRMS sync connectors (Keka, Darwinbox, Zoho People, greytHR) and SCIM 2.0.	C	Phase 1 = CSV scheduled import; native connectors Phase 2.

11.4 Digital Business Cards

As an Employee, **I want** a premium digital card I can share instantly, **so that** I make a strong impression and never run out of cards.

ID	Requirement	Pri.	Acceptance criteria
P1-CARD-01	Each employee seat has a mobile-first digital card page with company branding, photo, name, designation, verification badge, and primary action buttons.	M	Matches design system; responsive 320–1440 px; dark/light aware; Lighthouse performance ≥ 90 on mobile.
P1-CARD-02	Primary actions: Save Contact (vCard 3.0/4.0 with photo), Call, WhatsApp (click-to-chat with prefilled greeting), Email, Directions.	M	vCard opens native “add contact” on iOS & Android; WhatsApp deep link works on mobile and web.
P1-CARD-03	Share-back (“Share your details”) form so visitors leave their name, phone, email, company, note.	M	Creates Lead + Relationship (Section 12.5); employee notified in real time; consent checkbox recorded.
P1-CARD-04	Card sections: About, Products, Services, Portfolio, Gallery (images/video), Documents (brochure PDF), Social Links, Reviews (Phase 2), Company info, Branch location map.	M	Sections orderable and toggleable by admin (template) and employee (where unlocked).
P1-CARD-05	Template library (≥ 8 premium templates) + custom template builder (colours, fonts, layout, card shape).	M	Template change applies to all selected cards without breaking content.
P1-CARD-06	Sharing: copy link, WhatsApp, SMS, email signature generator (HTML), LinkedIn, native share sheet, downloadable QR image.	M	Email signature renders correctly in Gmail and Outlook.
P1-CARD-07	Wallet passes: Apple Wallet and Google Wallet card with QR.	S	Pass updates when card details change (push update).
P1-CARD-08	PWA install of “My Card” for employees with offline QR display.	M	QR viewable offline; installable on Android/iOS home screen.
P1-CARD-09	Multi-language card content (English + Hindi in Phase 1; regional languages later).	S	Visitor sees language toggle; admin provides translations or uses auto-translate (marked).
P1-CARD-10	Custom vanity slug and custom domain (cards.company.com) for Enterprise.	S	Custom domain with auto-TLS; old slugs 301-redirect.
P1-CARD-11	Lead-capture mode / event mode: card shows share-back form first.	C	Toggle per employee or per QR.

11.5 QR Codes

ID	Requirement	Pri.	Acceptance criteria
P1-QR-01	Every card has a dynamic QR pointing to an immutable short link (obg.in/xxxx).	M	Destination changeable without reprinting; scan resolves < 300 ms p95.
P1-QR-02	Branded QR (logo in centre, brand colours) downloadable as PNG/SVG/PDF in print resolutions.	M	Scannable at 2 cm print size; error correction level H when logo present.
P1-QR-03	Multiple QR codes per card with source tagging (e.g., “Expo 2026 standee”, “Brochure”) for attribution.	S	Analytics split by QR source.
P1-QR-04	Company/branch QR (counter standee, storefront) pointing to company or branch profile.	M	Standee print templates (A4/A5) generated.
P1-QR-05	Abuse protection: phishing/redirect safety (destinations restricted to OneBridge pages unless admin-approved external).	M	External destinations require Company Admin approval and pass URL safety check.

11.6 NFC Cards

As a Company Admin, **I want** to order branded NFC cards for my team and manage them centrally, **so that** employees can share with a single tap and lost cards are never a risk.

ID	Requirement	Pri.	Acceptance criteria
P1-NFC-01	NFC card catalogue: PVC, Wood, Metal; standard and custom-printed designs auto-generated from brand template.	M	Print proof (front/back) previewed and approved by admin before order.
P1-NFC-02	Chips encoded with NDEF URL record to immutable short link; NTAG 213/215/216 [Assumption]; write-locked after encoding.	M	Tap opens card on iOS (XS+) and Android with NFC on, without app.
P1-NFC-03	Order flow: select employees, materials, quantities, shipping (bulk/per-branch), pay with GST invoice.	M	Order confirmation + tracking via email/WhatsApp; invoice downloadable.
P1-NFC-04	Activation: employee taps card on own logged-in phone (or scans card QR) to bind chip UID to seat.	M	Unactivated chip shows activation page; activation recorded in audit log.
P1-NFC-05	Lost/stolen: disable chip, reassign, or reorder replacement.	M	Disabled chip shows neutral “card inactive” page; no personal data shown.
P1-NFC-06	Other NFC form factors: phone stickers, keychains, table standees, Google review stands.	C	Same order and activation flow.
P1-NFC-07	Ops fulfilment console: order queue, vendor assignment, encoding batch, QC checklist, dispatch, courier integration (Shiprocket/Delhivery).	M	Status timeline visible to customer; SLA breach alerts to ops.

11.7 Public Business Profile (Company Page, Products, Portfolio, Services, Gallery)

ID	Requirement	Pri.	Acceptance criteria
P1-PROF-01	Public company profile page: brand header, verification badge, about, branches with maps, departments/key contacts, products, services, portfolio, gallery, documents, social links, contact actions.	M	SEO-indexable (toggle); structured data (schema.org Organization/LocalBusiness); Open Graph previews.
P1-PROF-02	Product & service catalogue: name, images, description, price/price-on-request, category, enquiry button.	M	Up to 50 items (Starter), unlimited (Business+); enquiry creates lead.
P1-PROF-03	Portfolio/case studies with images, video embeds (YouTube/Vimeo), client logos.	M	Media optimised (WebP/AVIF), lazy-loaded.
P1-PROF-04	Gallery & documents (brochure, catalogue PDFs up to 25 MB).	M	Download tracked in analytics.
P1-PROF-05	Employee directory on company page (public subset chosen by admin).	S	Admin selects which roles/people are public.
P1-PROF-06	Google Business Profile & review link integration.	C	Pull rating; “Review us on Google” CTA.

11.8 Basic Analytics

ID	Requirement	Pri.	Acceptance criteria
P1-AN-01	Track events: card view (unique/total), QR scan (by source), NFC tap, save contact, call/WhatsApp/email click, link clicks, document downloads, share-back submissions.	M	Events visible in dashboards within 5 min; bot traffic filtered.
P1-AN-02	Employee dashboard: my views, saves, leads, top sources, 7/30/90-day trends.	M	Mobile-friendly; matches event counts ± 1%.
P1-AN-03	Admin dashboard: company totals, by branch/department/employee, leaderboard, top products viewed.	M	Scoped by role (Branch Manager sees only own branch).
P1-AN-04	Approximate location (city-level) and device type of interactions.	S	IP-derived city only; no precise location without consent.
P1-AN-05	CSV export and scheduled email reports (weekly).	S	Export respects role scope.

11.9 Subscriptions & Billing

ID	Requirement	Pri.	Acceptance criteria
P1-BILL-01	Plans and seat-based pricing per Section 18; monthly and annual billing; 14-day free trial of Business plan [Assumption].	M	Plan limits enforced (seats, templates, analytics retention, features).
P1-BILL-02	Payment via Razorpay: UPI (incl. UPI AutoPay mandates), cards, netbanking; Enterprise via invoice/NEFT.	M	Recurring billing with retries and dunning (D+1, D+3, D+7); grace period 7 days.

ID	Requirement	Pri.	Acceptance criteria
P1-BILL-03	GST-compliant invoices (company GSTIN, HSN/SAC, CGST/SGST/IGST split); credit notes.	M	Invoices auto-emailed; downloadable PDF; numbering per financial year.
P1-BILL-04	Seat add/remove with proration; upgrade/downgrade.	M	Downgrade never deletes data; over-limit seats become read-only.
P1-BILL-05	Add-on purchases: NFC cards, custom branding, custom domain, extra storage.	M	One-time and recurring add-ons on the same invoice where possible.
P1-BILL-06	Coupons, partner/reseller codes, and referral credits.	S	Reseller attribution reportable.
P1-BILL-07	Plan lapse behaviour: cards stay live 30 days with renewal banner to admin only; then cards show company basic profile.	M	OneBridge Business ID never released.

11.10 Notifications

ID	Requirement	Pri.	Acceptance criteria
P1-NOT-01	Channels: in-app, email, WhatsApp Business API, SMS, web push (PWA).	M	User-level preferences per event type; quiet hours.
P1-NOT-02	Events: new lead, card saved milestone, invite, approval requests, NFC order status, billing, security alerts.	M	New-lead notification delivered < 10 s.
P1-NOT-03	Daily/weekly digest for employees and managers.	S	Opt-out supported.

11.11 Platform Admin Console (internal)

ID	Requirement	Pri.	Acceptance criteria
P1-ADM-01	Tenant management: search orgs, view plan, usage, health; impersonate with consent & audit.	M	Impersonation requires reason, time-boxed, logged and visible to customer admin.
P1-ADM-02	KYB review queue with document viewer and decision log.	M	SLA timer; reviewer assignment.
P1-ADM-03	NFC operations (Section 11.6 P1-NFC-07).	M	—
P1-ADM-04	Content moderation: report abuse on cards/profiles; takedown workflow.	M	Reported content reviewed within 24 h.
P1-ADM-05	Feature flags and plan configuration without deploy.	S	Per-tenant overrides.

12. Phase 2: Directory, Networking, CRM & Analytics

Phase objective & exit criteria

Objective: convert card interactions into a persistent, searchable **relationship graph** that drives retention and network effects.

- ≥ 40% of active employees have ≥ 1 new relationship/week.
- Connection acceptance ≥ 55%; lead capture rate ≥ 8%.
- Native iOS/Android apps live with ≥ 4.5 store rating.
- Directory has ≥ 5,000 verified company profiles.

12.1 Connections (Relationship Layer)

As an Employee, **I want** to turn a card scan into a two-way connection, **so that** the relationship persists and both companies benefit.

ID	Requirement	Pri.	Acceptance criteria
P2-CON-01	Connect request between OneBridge identities (employee↔employee, company↔company) from card page, directory or app.	M	Accept/decline/ignore; duplicate prevention; connection creates edges at person and company level.
P2-CON-02	Relationship types: Customer, Partner, Supplier, Dealer, Vendor, Investor, Community, Event contact, Other; tagging and notes.	M	Type editable by both sides independently (private labels).
P2-CON-03	Tap-to-tap exchange: two OneBridge users exchange via NFC/QR in app; both receive each other's cards.	S	Exchange recorded with time and (optional) event/location.
P2-CON-04	Relationship timeline: all interactions (views, saves, messages, meetings, notes, deals).	M	Timeline visible to owner and authorised managers only.
P2-CON-05	Company-owned relationship ownership & transfer on offboarding (Section 9.3 F3).	M	Transfer preserves full timeline.
P2-CON-06	Business card scanner (OCR) to digitise paper cards received.	S	Field extraction accuracy ≥ 90% on standard cards; creates contact + relationship.

12.2 Messaging

ID	Requirement	Pri.	Acceptance criteria
P2-MSG-01	1:1 messaging between connected users; message requests from non-connections (rate-limited).	M	Real-time delivery (WebSocket); read receipts; attachments ≤ 25 MB.
P2-MSG-02	Company inbox: messages to company profile routed to department queues.	S	Assignment, internal notes, SLA timers.
P2-MSG-03	WhatsApp Business API bridge for visitors who prefer WhatsApp.	S	Conversation logged to relationship timeline with consent.
P2-MSG-04	Spam & abuse controls: block, report, rate limits, keyword filters.	M	Blocked users cannot view private profile details or message.

12.3 Business Directory

As a Procurement Manager, **I want** to search verified businesses by category, location and capability, **so that** I can discover reliable suppliers and partners.

ID	Requirement	Pri.	Acceptance criteria
P2-DIR-01	Searchable directory of companies (opt-in, verified first) with filters: industry, city/state, size, products/services, certifications, verification status.	M	Search p95 < 500 ms; typo-tolerant; Hindi transliteration support.
P2-DIR-02	People search within allowed visibility (public employee cards only).	M	Respects employee and company privacy settings.
P2-DIR-03	Category taxonomy (NIC codes mapped to friendly categories) and product tags.	M	Admin-managed taxonomy; suggestions on profile setup.
P2-DIR-04	Featured listings / sponsored placement (clearly labelled).	C	Revenue line “Advertising (Future)”.
P2-DIR-05	SEO landing pages per category × city.	S	Indexable; canonical tags; no thin pages (≥ 5 listings).

12.4 Communities

ID	Requirement	Pri.	Acceptance criteria
P2-COM-01	Create communities (industry associations, chambers, alumni, dealer networks) with public/private/invite-only membership.	M	Owner/moderator roles; member directory.
P2-COM-02	Community posts, announcements, Q&A, and resource library.	S	Moderation queue; report content.
P2-COM-03	Company-private communities (e.g., a manufacturer’s dealer network).	M	Membership restricted to invited companies.

12.5 CRM & Lead Tracking

As a Sales Manager, **I want** every lead from cards, QR and events to land in one pipeline, **so that** my team follows up and I can measure conversion.

ID	Requirement	Pri.	Acceptance criteria
P2-CRM-01	Contacts & Leads: auto-created from share-back, enquiries, scans, connections; manual add; dedupe & merge.	M	Source attribution (employee, QR source, event) stored on every lead.
P2-CRM-02	Pipeline (Kanban) with customisable stages, deal value (INR), expected close date.	M	Drag-drop updates; stage history.
P2-CRM-03	Tasks, follow-up reminders, notes, call logging; auto-reminder if new lead untouched for 24 h.	M	Reminders via push/WhatsApp/email.

ID	Requirement	Pri.	Acceptance criteria
P2-CRM-04	Lead assignment rules (round robin, by branch, by product) and manager reassignment.	S	Assignment logged.
P2-CRM-05	Import/export CSV; two-way sync with Zoho CRM, HubSpot, Salesforce (Enterprise).	S	Sync conflict policy documented; sync status visible.
P2-CRM-06	CRM is a paid add-on on Starter/Business, included on Enterprise (Section 18).	M	Feature gating enforced.

12.6 Reviews & Trust

ID	Requirement	Pri.	Acceptance criteria
P2-REV-01	Verified reviews of companies (and optionally employees) only from connected/transacted parties.	M	Reviewer must have a recorded relationship; 1 review per relationship.
P2-REV-02	Company responses, reporting, moderation.	M	Fake-review detection rules; takedown SLA 48 h.
P2-REV-03	Trust score (verification, tenure, reviews, response rate) displayed on profile.	S	Formula documented publicly.

12.7 Events

ID	Requirement	Pri.	Acceptance criteria
P2-EVT-01	Event mode for exhibitors: tag all relationships captured during an event; booth QR; team lead leaderboard.	M	Event report: leads by employee, conversion after 30 days.
P2-EVT-02	Event organiser tools: attendee registration, attendee badges with QR/NFC, attendee networking & lead exchange.	S	Organiser add-on pricing.

12.8 Advanced Analytics

ID	Requirement	Pri.	Acceptance criteria
P2-AN-01	Funnel: view → save → message → connect → lead → deal, by employee/branch/source.	M	Drill-down to records within role scope.
P2-AN-02	Relationship health: dormant relationships, response time, coverage of key accounts.	S	Alerts for key accounts with no activity in 60 days.
P2-AN-03	Custom reports & dashboards; scheduled exports; BI connector (read API).	S	Enterprise only for BI connector.

12.9 Native Mobile Apps

ID	Requirement	Pri.	Acceptance criteria
P2-MOB-01	iOS & Android apps (React Native) for employees: my card, share, NFC write/read, scanner, leads, messages, connections, notifications.	M	Feature parity with PWA + native NFC; crash-free sessions ≥ 99.5%.
P2-MOB-02	Offline mode: view card/QR, capture leads offline, sync later.	M	No data loss on reconnect; conflict handling.
P2-MOB-03	Home-screen widget and lock-screen QR.	S	—

12.10 Integrations

ID	Requirement	Pri.	Acceptance criteria
P2-INT-01	Google/Microsoft contacts & calendar sync for leads and meetings.	S	User consent; selective sync.
P2-INT-02	HRMS connectors & SCIM 2.0 provisioning.	S	Joiner/mover/leaver automated.
P2-INT-03	Zapier/Make connector and outbound webhooks (lead.created, connection.accepted, etc.).	S	Signed webhooks; retries with backoff.

13. Phase 3: AI Intelligence, Marketplace & Automation

Phase objective & exit criteria

Objective: because every relationship exists inside the network, OneBridge AI can recommend businesses, suggest partnerships, generate leads, find suppliers, identify customers, recommend employees and track growth.

- Recommendation acceptance ≥ 12%; measurable lift in lead-to-deal conversion for AI users vs. control (≥ 10%).
- Marketplace live with ≥ 1,000 active sellers; first commission revenue.
- AI credit consumption ≥ 30% of eligible orgs.
- AI safety & privacy review passed (Section 16.5).

13.1 AI Assistant

As a Business Owner, **I want** to ask questions about my network and pipeline in plain language, **so that** I get insight without building reports.

ID	Requirement	Pri.	Acceptance criteria
P3-AI-01	Conversational assistant (web + app) with RAG over the tenant's own data: relationships, leads, notes, analytics, products.	M	Answers cite records; never retrieves data outside the tenant or the user's RBAC scope.
P3-AI-02	Generation tasks: card bio, company about, product descriptions, follow-up messages (WhatsApp/email), meeting summaries.	M	User reviews before sending; nothing sent automatically without explicit setting.
P3-AI-03	Meeting prep brief: who is this contact, relationship history, mutual connections, suggested talking points.	S	Generated < 8 s.
P3-AI-04	Multilingual (English, Hindi + top regional languages) input/output.	S	Language auto-detect.
P3-AI-05	Usage metered in AI credits (Section 18).	M	Credit balance visible; hard/soft limits configurable by admin.

13.2 Lead Intelligence

ID	Requirement	Pri.	Acceptance criteria
P3-LI-01	Lead scoring (0–100) from engagement signals, firmographics, relationship proximity and history.	M	Score explanation shown (top 3 factors); model retrained monthly; AUC ≥ 0.75 on holdout.
P3-LI-02	Next-best-action suggestions (follow up, share brochure, introduce colleague).	S	Acceptance tracked for learning.
P3-LI-03	Intent signals: repeated card views, brochure downloads, product page views.	M	Real-time alert to owner when high-intent threshold crossed.

13.3 Business Recommendations (Network Intelligence)

ID	Requirement	Pri.	Acceptance criteria
P3-REC-01	Recommend businesses & partnerships using graph features (mutual connections, industry adjacency, geography, complementary products).	M	Each recommendation shows “why”; dismiss/feedback loop.
P3-REC-02	Supplier finder: describe a need → ranked verified suppliers from directory and marketplace.	M	Only opted-in, verified companies recommended.
P3-REC-03	Customer identification: lookalike companies to best customers.	S	Uses only directory-public firmographics and the tenant’s own data.
P3-REC-04	Warm introductions: path through the graph (“Your colleague X knows Y at Z”) with request-intro workflow.	S	Intermediary must approve before contact details are shared.
P3-REC-05	Employee recommendations: which internal employee is best placed to own an account or attend a meeting.	C	Visible to managers only.
P3-REC-06	Growth tracking: network growth, relationship value, pipeline influenced by OneBridge.	M	Monthly “Growth report” to owners.

13.4 Marketplace & Vendor Discovery

ID	Requirement	Pri.	Acceptance criteria
P3-MKT-01	B2B marketplace listings from product catalogues; RFQ (request for quotation) workflow.	M	Buyer posts RFQ → matched verified sellers notified → quotes compared.
P3-MKT-02	Commission model on marketplace-originated deals (success fee) and/or lead fee [Assumption].	M	Attribution window 90 days; transparent seller dashboard.
P3-MKT-03	Seller verification tiers and ratings tied to reviews.	M	Only KYB-verified sellers can list.
P3-MKT-04	Payments/escrow via partner (Razorpay Route) for low-ticket orders.	C	Phase 3.5 depending on demand.

13.5 Referral Network

ID	Requirement	Pri.	Acceptance criteria
P3-REF-01	Businesses refer leads to partners; referral tracking with optional referral fee agreement.	S	Referrer sees status; payout records exportable.
P3-REF-02	Customer referral programme for OneBridge itself (credits).	M	Credits auto-applied to invoices.

13.6 Business Automation

ID	Requirement	Pri.	Acceptance criteria
P3-AUTO-01	No-code workflows: trigger (lead created, card saved, event ended) → conditions → actions (assign, message template, task, webhook).	M	≥ 20 prebuilt recipes; execution log; failure alerts.
P3-AUTO-02	AI-drafted follow-up sequences with approval step.	S	Opt-in; respects DND and consent.

13.7 Public API & Developer Platform

ID	Requirement	Pri.	Acceptance criteria
P3-API-01	REST + GraphQL public API (OAuth 2.0 client credentials), scoped tokens, rate limits per plan.	M	OpenAPI docs; sandbox tenant; versioned (v1).
P3-API-02	Embeddable widgets: “Meet our team”, card embed, lead form.	S	Lightweight (< 50 KB JS).

14. Phase 4: OneBridge Career

Scope boundary

OneBridge Career is an **extension of the ecosystem, not part of the initial business product**. It launches only after the business network has reached critical mass (proposed gate: ≥ 5,000 paying orgs and ≥ 250,000 active employee seats [Assumption]).

Phase objective & exit criteria

Objective: extend OneBridge identity to individuals (students and professionals), with verified employment from the company graph, hiring and mentorship.

- 100,000 career profiles in 12 months; ≥ 50% with verified employment.
- ≥ 500 employers posting jobs; time-to-shortlist improvement for employers.
- Clear separation between company-owned business identity and person-owned career identity (privacy review passed).

14.1 Personal Career Identity

As a Professional, **I want** a portable career identity that I own, separate from my employer's card, **so that** my verified experience moves with me between jobs.

ID	Requirement	Pri.	Acceptance criteria
P4-CAR-01	Person-owned career profile (separate from company-owned employee seat): headline, experience, education, skills, certifications, portfolio, career card with QR/NFC.	M	Data owned by the individual; export & delete (DPDP rights).
P4-CAR-02	Verified employment: with consent, link past/present OneBridge seats to career profile as verified experience (company, title, dates).	M	Company can confirm/deny; no company-confidential data (leads, relationships) transferred.
P4-CAR-03	Credential verification for education/certifications (DigiLocker / institution partnerships).	S	Verified badge per credential.
P4-CAR-04	Privacy controls: open-to-work visibility, hide from current employer.	M	Current employer admins cannot see open-to-work status.

14.2 Students

ID	Requirement	Pri.	Acceptance criteria
P4-STU-01	Student profiles via institution onboarding (colleges as organisations) with student ID verification.	M	Institution admin console reusing Phase 1 org module.
P4-STU-02	Internship and placement drives with company participation.	S	Placement cell dashboard.

14.3 Hiring

ID	Requirement	Pri.	Acceptance criteria
P4-HIR-01	Job posts from verified companies; employer branding page reusing company profile.	M	Only KYB-verified companies can post.
P4-HIR-02	Applicant tracking lite: pipeline, notes, interview scheduling, offer status.	M	Export to external ATS.
P4-HIR-03	AI candidate matching & employee referrals via the graph.	S	Bias controls: no protected attributes used; explanation shown.

14.4 Mentorship

ID	Requirement	Pri.	Acceptance criteria
P4-MEN-01	Mentor profiles, availability, booking (free/paid), session notes.	S	Payment via Razorpay; platform fee [Assumption].
P4-MEN-02	Mentorship matching by goals, industry and skills.	S	Feedback after each session.

14.5 Career Network

ID	Requirement	Pri.	Acceptance criteria
P4-NET-01	Professional connections and messaging reusing Phase 2 networking with person-level identities.	M	Business vs. career context clearly separated in UI.
P4-NET-02	Career communities (alumni, skill groups).	S	Reuses Communities module.

15. Roles & Permissions (RBAC)

Legend: ✓ full · S = own scope (branch/department/team) · O = own records only · R = read-only · — = none.

Capability	Owner	Co. Admin	Branch Mgr	Dept Mgr / Team Lead	Employee	Viewer / Auditor
Billing, plan, invoices	✓	R	—	—	—	R
Company profile & brand kit	✓	✓	R	R	R	R
Branches / departments / teams	✓	✓	S	S (teams)	—	R
Add / offboard employees	✓	✓	S	S (if delegated)	—	—
Edit employee card	✓	✓	S	S	O (unlocked fields)	—
Order NFC cards	✓	✓	S	—	Request	—
Analytics	✓	✓	S	S	O	R
Leads / CRM	✓	✓	S	S	O	R
Reassign relationships	✓	✓	S	S	—	—
Audit log	✓	✓	S	—	—	R
Integrations, API keys, SSO	✓	✓	—	—	—	—
AI assistant (data scope)	✓	✓	S	S	O	R

Custom roles (Enterprise): admins can clone a role and toggle permissions. Every permission check is enforced server-side by tenant + scope; the UI only hides what the server denies.

16. Non-Functional Requirements

16.1 Performance & scalability

Area	Requirement
Public card page	LCP ≤ 1.5 s p75 on Indian 4G (Slow-4G profile ≤ 2.5 s); TTFB ≤ 200 ms via edge caching; page weight ≤ 300 KB before media
Short-link / QR / NFC redirect	≤ 100 ms p95 at edge; 99.99% availability
Dashboard APIs	p95 ≤ 400 ms read, ≤ 800 ms write
Search (Phase 2)	p95 ≤ 500 ms
AI responses (Phase 3)	First token ≤ 2 s; full answer ≤ 10 s p95
Scale targets	10M card views/day; 1M seats; 50k concurrent dashboard users; spike tolerance 10× during large events

16.2 Availability & reliability

- SLA: 99.9% monthly for dashboard/APIs (Business), 99.95% (Enterprise); public cards & redirects 99.99% (served from edge cache even if origin is down).
- RPO ≤ 15 min, RTO ≤ 4 h; daily backups retained 35 days; quarterly restore drills.
- Graceful degradation: if analytics pipeline is down, card pages still serve and events queue for replay.

16.3 Security

- OWASP ASVS Level 2 baseline; annual third-party penetration test; bug bounty after Phase 1 GA.
- TLS 1.2+ everywhere; AES-256 encryption at rest; field-level encryption for phone/email of external contacts.
- Strict tenant isolation (tenantId on every document + enforced in data-access layer + automated isolation tests).
- Admin MFA mandatory for Owner/Admin on Business+; session management & device revocation; SSO (SAML/OIDC).
- Secrets in a managed vault; least-privilege IAM; immutable audit logs.
- Rate limiting, bot protection (Cloudflare) on public pages and share-back forms; CAPTCHA only on suspicious traffic.
- Target certifications: ISO 27001 within 12 months of GA; SOC 2 Type II before large-enterprise push [Assumption].

16.4 Privacy & compliance (India-first)

- **Digital Personal Data Protection Act, 2023 (DPDP) & Rules**: notice + consent for share-back forms and non-essential tracking; purpose limitation; data principal rights (access, correction, erasure, grievance); breach notification; consent records stored.
- OneBridge acts as **Data Processor** for customer-owned employee & lead data and as **Data Fiduciary** for platform accounts, visitors and (Phase 4) career profiles; DPA template for customers.
- **Data residency**: primary storage in India (AWS ap-south-1 Mumbai, DR in ap-south-2 Hyderabad).
- GST compliance for invoicing; IT Act 2000 & CERT-In incident reporting (6-hour window).

- TRAI DLT registration for SMS templates; WhatsApp Business Policy compliance; DND respect for marketing messages.
- Global readiness: GDPR-compatible controls so EU/UK/Middle-East expansion does not need re-architecture.

16.5 AI safety & data ethics (Phase 3+)

- Tenant data is never used to train shared foundation models; any cross-tenant learning uses only opted-in, aggregated, de-identified signals.
- Retrieval strictly scoped by tenant + RBAC; prompt-injection defences on user-generated content (cards, reviews, messages).
- Human-in-the-loop for any outbound communication; explanations for scores/recommendations; no protected attributes in hiring models (Phase 4).
- Model/provider abstraction layer to swap LLM vendors; cost and latency monitoring per tenant.

16.6 Accessibility, localisation & compatibility

- WCAG 2.1 AA for dashboards and public pages.
- Languages: English + Hindi (Phase 1); Tamil, Telugu, Kannada, Marathi, Bengali, Gujarati (Phase 2) [Assumption]. INR currency, Indian number formatting (lakh/crore), IST default with timezone support.
- Browsers: latest 2 versions of Chrome, Safari, Edge, Firefox; Android 9+, iOS 15+; low-end Android devices (2 GB RAM) must render cards smoothly.

17. Technical Architecture

17.1 High-level architecture

Web / PWA / Mobile Apps → Edge (Cloudflare CDN, WAF, short-link workers) → API Gateway → Domain services → Shared Data Layer

Service	Responsibility	Phase
Identity Service	Accounts, auth (OTP, OAuth, SSO), OneBridge Business ID, KYB, seats, RBAC	1
Organization Service	Companies, branches, departments, teams, employees, brand kit	1
Business Card Service (QR/NFC)	Cards, templates, short links, QR generation, NFC chip registry, wallet passes, public rendering (ISR/edge)	1
Profile & Catalogue Service	Company profile, products, services, portfolio, gallery, documents	1
Payments Service	Plans, subscriptions, Razorpay, GST invoicing, add-ons, NFC orders	1
Notification Service	Email, SMS (DLT), WhatsApp BSP, push, in-app; templates & preferences	1
Analytics Service	Event ingestion, aggregation, dashboards, exports	1–2
Network Service	Connections, relationship graph, directory, communities, messaging, reviews, events	2
CRM Service	Contacts, leads, pipeline, tasks, sync connectors	2
AI Service	LLM gateway, RAG, embeddings, scoring, recommendations, credits metering	3
Marketplace Service	Listings, RFQ, attribution, commissions	3
Career Service	Career profiles, verification, jobs, mentorship	4

17.2 Technology stack (from source, with proposals)

Layer	Source stack	Additions / notes [Assumption]
Frontend	React, Next.js, TypeScript	Next.js App Router with ISR/edge rendering for card pages; Tailwind + in-house design system; PWA (Workbox)
Mobile (Phase 2)	—	React Native (Expo) sharing TypeScript types & API client; native NFC modules
Backend	Node.js, NestJS	Modular monolith first (service boundaries as NestJS modules) → extract services when scale requires; BullMQ for jobs
Database	MongoDB	MongoDB Atlas (Mumbai), tenantId-indexed collections; graph via $graphLookup initially; evaluate Neo4j/Neptune at Phase 3
Cache / queues	Redis	Redis for cache, sessions, rate limits, BullMQ; event stream (Kafka/Redpanda or AWS Kinesis) for analytics
Analytics store	—	ClickHouse (or BigQuery) for event analytics
Search	—	OpenSearch / Meilisearch for directory & people search (Phase 2)
AI	LLMs, RAG, Vector Database	LLM gateway with provider abstraction; vector store (MongoDB Atlas Vector Search or pgvector/Qdrant); evaluation harness
Storage / CDN	AWS, Cloudflare	S3 (ap-south-1) for media; Cloudflare CDN + Images; Workers for short-link redirect

Layer	Source stack	Additions / notes [Assumption]
Payments & comms	—	Razorpay (subscriptions, UPI AutoPay, Route); WhatsApp BSP (e.g., Gupshup/Meta Cloud API); MSG91 for SMS/OTP
DevOps	—	Docker, AWS ECS/EKS, Terraform, GitHub Actions, OpenTelemetry, Sentry, Grafana

17.3 Multi-tenancy

Shared infrastructure with logical isolation (tenantId on every record, enforced in repository layer and covered by automated cross-tenant tests). Enterprise option: dedicated database cluster and custom domain. All public card pages are statically rendered and cached at the edge, then revalidated on change.

17.4 Core data model

Entity	Key attributes	Relations
Organization	businessId, legalName, displayName, gstin, kybStatus, plan, brandKit, slug, domains[]	has Branches, Departments, Seats, Subscription
Branch / Department / Team	id, orgId, name, address/geo, managerSeatId, status	tree under Organization
Seat (Employee Identity)	seatId, orgId, title, branchId, deptId, teamId, managerSeatId, status, assignedPersonId	has Card, QRCodes, NfcChips, Relationships
Person (User)	userId, phone, email, name, authProviders, mfa	assigned to Seats (many orgs possible)
Card	cardId, seatId, templateId, sections[], fields, visibility, lang	rendered at public URL
ShortLink	code, targetType, targetId, source, status	used by QR and NFC
NfcChip	uid, shortLinkCode, material, orderId, seatId, status (unactivated/active/lost)	belongs to Seat
Order	orderId, orgId, items[], amount, gst, shipping, status timeline	Payments
Contact	contactId, orgId, name, phones, emails, company, consent	external person
Relationship (edge)	id, fromNode, toNode, type, ownerSeatId, orgId, strength, createdVia, timeline[]	Graph core
Lead / Deal	leadId, contactId, source, ownerSeatId, stage, value, score	CRM
Event (analytics)	type, seatId, orgId, source, ts, device, city, sessionId	ClickHouse
Subscription / Invoice	plan, seats, cycle, status, razorpayIds, gstBreakup	Billing
AuditLog	actor, action, entity, before, after, ts, ip	immutable
Community / Review / Message / Listing / RFQ / CareerProfile / Job	Phase 2–4 entities	link to Org / Seat / Person

17.5 Key API surface (v1, illustrative)

Endpoint	Purpose
POST /auth/otp · POST /auth/verify	OTP login
POST /orgs · GET/PATCH /orgs/{id}	Create/manage organisation (generates Business ID)
POST /orgs/{id}/kyb	Submit KYB documents/GSTIN
CRUD /orgs/{id}/branches · /departments · /teams	Organisation structure
POST /orgs/{id}/seats:import	Bulk employee import (async job)
POST /seats/{id}:offboard	Deactivate / redirect / reassign
GET/PATCH /cards/{id} · GET /public/c/{slug}	Card management and public rendering
GET /r/{code}	Short-link resolve (edge) for QR/NFC
POST /nfc/orders · POST /nfc/chips/{uid}:activate	NFC ordering and activation
POST /public/c/{slug}/shareback	Visitor share-back → lead + relationship
POST /events	Analytics event ingestion (batched)
CRUD /connections · /leads · /messages (P2)	Networking & CRM
POST /ai/ask · GET /ai/recommendations (P3)	AI assistant & recommendations
Webhooks: lead.created, card.saved, connection.accepted, seat.offboarded	Integrations

18. Monetisation & Pricing (INR)

The source defines the revenue chain as: Business Subscription → Company Dashboard → Employee Management → Digital Business Cards → NFC Cards → Analytics → CRM → Business Network → Future AI Features. Revenue streams: Business Subscription, Premium Plans, NFC Card Sales, Custom Branding, Enterprise Plans, CRM Add-ons, Marketplace Commission, AI Credits, Advertising (Future).

> **All price points below are proposals [Assumption]**
>
> Prices exclude 18% GST. Validate with 15–20 customer interviews and competitor benchmarking before launch. Annual billing ≈ 20% discount.

18.1 Subscription tiers

	Free	Starter	Business	Enterprise
Price (per seat / month)	₹0	₹199 (₹159 annual)	₹349 (₹279 annual)	Custom (from ~₹450, min. 100 seats)
Seats	1	1–25	10–1,000	100+
Digital card, QR, PWA	✓ (OneBridge branding)	✓	✓	✓
Templates	2	All standard	All + custom builder	All + bespoke design
Branches / departments	—	1 branch	Unlimited	Unlimited
Products / catalogue items	5	50	Unlimited	Unlimited
Analytics retention	7 days	90 days	1 year	2+ years, exports, BI
Share-back lead capture	✓ (email only)	✓	✓	✓
Admin approvals, bulk ops, audit log	—	Basic	✓	✓
Verification badge (KYB)	—	✓	✓	✓
SSO, SCIM, custom domain, custom roles	—	—	Add-on	✓
CRM (Phase 2)	—	Add-on	Add-on	Included
Support / SLA	Community	Email	Priority chat, 99.9%	Dedicated CSM, 99.95%

18.2 Hardware & add-ons

Item	Proposed price	Notes
NFC card: PVC (custom printed)	₹599 each	Volume: − 10% at 50+, − 20% at 250+
NFC card: Wood / Bamboo	₹999 each	Sustainability positioning
NFC card: Metal	₹2,499 each	Premium/leadership
Replacement card	₹449	Same design
NFC standee / review stand / sticker	₹399 – ₹1,299	Counters, storefronts

Item	Proposed price	Notes
Custom branding (remove OneBridge mark)	₹999 / org / month	Included in Enterprise
Custom domain	₹1,499 / org / month	Included in Enterprise
CRM add-on (Phase 2)	₹149 / seat / month	
Event mode / organiser (Phase 2)	₹4,999 per event (exhibitor) · organiser custom	
AI credits (Phase 3)	₹999 per 1,000 credits; monthly included quota per tier	Credit = normalised unit of LLM cost
Marketplace (Phase 3)	2–5% success fee or per-qualified-RFQ lead fee	Category dependent
Advertising (Future)	Sponsored directory placements	Clearly labelled; Phase 3+
Career (Phase 4)	Job posts, recruiter seats, premium profiles, mentorship platform fee	Priced at Phase 4 kickoff

18.3 Illustrative unit economics [Assumption]

- Typical Business customer: 40 seats × ₹279 (annual) ≈ ₹11,160/month (≈ ₹1.34 L ARR) + 40 PVC cards one-time ≈ ₹21,600.
- Target gross margin ≥ 80% on software, ≥ 40% on hardware; CAC payback ≤ 12 months for SMB, ≤ 18 months for Enterprise.

19. Analytics & Instrumentation Plan

Event	Properties	Used for
org_signed_up · plan_selected · payment_succeeded	plan, seats, source, referrer	Acquisition funnel
seat_created · card_published · card_shared	method (import/invite), channel	Activation, time-to-first-card
card_viewed · qr_scanned · nfc_tapped	seatId, source tag, device, city	Engagement, attribution
contact_saved · cta_clicked (call/whatsapp/email)	seatId, cta	View→save rate
shareback_submitted · lead_created · lead_stage_changed	source, owner, stage, value	Lead funnel, CRM
connection_requested / accepted · message_sent	type, initiator	MABR, network growth
recommendation_shown / acted	type, reason codes	AI acceptance
nfc_order_placed / delivered / activated	material, qty, SLA	Hardware ops

Product analytics via PostHog (self-hosted in India) or similar [Assumption]; customer-facing analytics from the platform's own ClickHouse pipeline. No third-party ad trackers on public card pages.

20. Go-to-Market Summary

- **Narrative:** never sell “digital business cards”. Sell “OneBridge Grid: the Digital Business Identity & Relationship Infrastructure for modern businesses”.
- **Motions:** product-led (Free → Starter self-serve via WhatsApp-viral card sharing: every shared card carries a subtle “Get your OneBridge card” CTA on Free/Starter); sales-led for Business/Enterprise (field-sales-heavy sectors: BFSI, pharma, real estate, FMCG, manufacturing).
- **Channels:** chambers of commerce & industry associations (communities), event organisers (expo lead exchange), resellers/print shops (NFC), HRMS partners.
- **Launch geography:** Hyderabad, Bengaluru, Mumbai, Pune, Delhi-NCR, Chennai first [Assumption]; then Tier-2 cities with regional language support.
- **Proof points:** time saved per onboarding, leads captured per event, relationships retained after employee exits.

21. Roadmap & Release Plan

> **Timelines are indicative [Assumption]**
> They assume a core team of ~8–10 for Phase 1 (1 PM, 1 designer, 5–6 engineers, 1 QA, ops for NFC) and scale with funding. Each phase starts only when the previous phase's exit criteria are met.

Phase	Window	Milestones	Exit criteria
Phase 1: Identity Cards	Months 0–5	M1 design system & architecture · M3 alpha (internal) · M4 closed beta (20–50 orgs) · M5 GA	See Section 11 header; ≥ 50 paying orgs; NFRs met
Phase 2: Directory Networking	Months 6–12	Connections & CRM (M7) · Directory & Reviews (M8) · Native apps (M9) · Events & Communities (M10) · Integrations (M12)	See Section 12 header; 1,000 paying orgs
Phase 3: AI Intelligence	Months 12–20	AI assistant beta (M13) · Lead scoring (M14) · Recommendations (M15) · Marketplace & RFQ (M17) · Automation & public API (M19)	See Section 13 header
Phase 4: Career Networks	Months 20–28 (gated)	Career identity & verified employment · Student/institution onboarding · Hiring · Mentorship · Career network	See Section 14 header

21.1 Phase 1 MVP cut (release-blocking scope)

All **M** requirements in Section 11, specifically: Business ID & OTP auth · KYB with badge · company/branch/department setup · employee import, invite, RBAC, offboarding · card templates & sections · Save Contact, WhatsApp, share-back · dynamic branded QR · NFC ordering, encoding, activation, lost-card · company profile with products/portfolio/gallery · basic analytics · Razorpay subscriptions + GST invoices · notifications · ops console · audit log · PWA.

22. Risks & Mitigations

Risk	Likelihood / Impact	Mitigation
Perceived as “just another digital card app”; price competition	High / High	Lead with organisation-first identity, offboarding & relationship ownership; bundle analytics/CRM; enterprise features as moat
Low visitor engagement beyond card view	Med / High	Design every card for next step (save, WhatsApp, share-back); A/B test CTAs; measure view→save
Employee resistance (privacy, “company tracks my contacts”)	Med / Med	Transparent policies, personal vs. company data separation, employee-visible privacy settings
NFC hardware logistics, quality & margin	Med / Med	Two vetted vendors, QC checklist, re-pointable short links (no re-encoding), regional fulfilment
Cold-start for directory & network effects	High / High	Seed via associations/chambers and dealer networks; directory opt-in by default for verified orgs (with consent); event-led growth
DPDP / data-protection non-compliance	Low / High	Privacy by design, DPO, consent logs, India data residency, legal review each phase
AI hallucination / data leakage across tenants	Med / High	Strict RAG scoping, citations, evals, red-teaming, human approval for outbound messages
Scope creep across 4 phases	High / Med	Phase gates with exit criteria; MoSCoW discipline; Career strictly gated
WhatsApp/SMS policy & cost changes	Med / Med	Multi-channel notifications; template governance; cost monitoring

23. Assumptions & Dependencies

23.1 Key assumptions

- Initial buyers are Indian SMBs and mid-market companies; enterprises follow after SSO/SCIM/compliance readiness.
- Visitors will not install an app; the web card page is the primary visitor surface.
- Customers accept that the company (not the employee) owns business relationships captured through company-issued cards.
- Pricing, targets and timelines marked [Assumption] are proposals pending validation.

23.2 External dependencies

Dependency	Used for	Fallback
GST verification API / aggregator	KYB	Manual review queue
Razorpay	Subscriptions, UPI AutoPay, payouts	Cashfree / PayU
WhatsApp BSP & MSG91 (DLT)	OTP, notifications	Email / alternate BSP
NFC card vendors & couriers	Hardware	Second vendor; Shiprocket aggregator
Apple/Google Wallet	Wallet passes	PWA card
LLM providers & vector DB	Phase 3 AI	Provider abstraction; second vendor
DigiLocker / institutions	Phase 4 credential verification	Manual / document upload

24. Open Questions

#	Question	Owner	Needed by
Q1	What is “GRID AI” in the competitive comparison: a specific competitor, an internal concept, or a placeholder?	Founders	Before positioning sign-off
Q2	OneBridge_Grid_Ecosystem.pptx is truncated/corrupt. Is there content in the deck beyond the notebook sources? Please re-share.	Founders	Next PRD revision
Q3	Final pricing & tier boundaries (Section 18); is a Free tier strategically desired or only a trial?	Founders / GTM	Before beta
Q4	Can employees keep any personal copy of contacts they collected after leaving? Default policy & admin override?	Product / Legal	Before Phase 1 build of F3
Q5	Domain & brand: grid.onebridge.in / obg.in availability; legal entity name for invoices.	Founders	Month 1
Q6	Directory default: opt-in or opt-out for verified companies?	Product / Legal	Phase 2 kickoff
Q7	Build vs. partner for CRM sync and HRMS connectors.	Engineering	Phase 2 planning
Q8	Marketplace model: commission vs. lead fee vs. subscription for sellers.	Founders	Phase 3 planning
Q9	Phase 4 gating thresholds and whether Career gets a separate brand/app.	Founders	Phase 3 mid-point
Q10	Team size, budget and target GA date (affects Section 21 timelines).	Management	PRD sign-off

25. Glossary

Term	Definition
OneBridge Grid	The network of trusted business relationships formed by companies, employees and their connections on OneBridge
OneBridge Business ID	Permanent unique identifier for an organisation; root of all its identities
Seat / Employee Identity	Company-owned identity slot (card, QR, NFC, relationships) to which a person is assigned
Person	An individual user account with login credentials
KYB	Know Your Business: verification of a company's legal existence (GSTIN, CIN, Udyam, PAN)
Share-back	Visitor action of sharing their own details from a card page, creating a lead
Short link	Immutable OneBridge URL encoded in QR/NFC whose destination can be changed
MABR	Monthly Active Business Relationships, the North Star Metric
RFQ	Request for Quotation (marketplace)
RAG	Retrieval-Augmented Generation: AI answers grounded in retrieved tenant data
DPDP	India's Digital Personal Data Protection Act, 2023
NDEF / NTAG	NFC data format / NXP NFC chip family used in cards

Appendix A: Source Traceability

Source item	PRD section(s)
Vision: “The Digital Business Card is not the product; it is the gateway”	1, 4
Core philosophy chain (Physical Business → … → Business Growth)	4.4
Seven-layer architecture (Identity → Growth); platform layers (Identity, Organization, Digital, Relationship, Intelligence)	8.1
Identity architecture: one permanent identity; identity belongs to company	8.2, 11.1
Organization architecture (Company Admin, Branch, Branch Manager, Sales/Marketing/HR/Support/Development, Employees)	8.3, 11.2, 11.3
Business network (Company A/B/C → Employees → Customers/Partners/Suppliers)	8.4, 12
Customer journey (Business Owner → … → Business Expands)	9.1
Business card flow (Company → … → Long-term Relationship)	9.2
Slide 2 problems	3
Slide 8 core modules (Identity … AI Assistant)	10–13
Slide 10 card experience (premium card, QR, NFC, save contact, products, portfolio, gallery, social, WhatsApp, analytics, reviews, verification badge, branding)	11.4–11.7, 12.6
Slide 12 business intelligence capabilities	13.1–13.3
Slide 13 roadmap (Phases 1–4)	1, 10–14, 21
Slide 14 revenue model; source revenue chain	18
Slide 15 technology (React, Next.js, TypeScript, Node.js, NestJS, MongoDB, Redis, LLMs, RAG, Vector DB, AWS, Cloudflare)	17.2
High-level technical architecture (API Gateway; Identity, Business Card, Network, AI, Notification, Analytics, Payments services)	17.1
Slide 16 competitive positioning; Slide 17 why OneBridge wins	7
Slide 18 long-term vision; Slide 19 closing statement	4.6
Future expansion (CRM, Marketplace, Vendor Discovery, Referral, Events, Communities, AI Assistant, BI, API, Career)	12–14
